

ABSTRACT OF THE DISCLOSURE

A system, a method, and a cellular communication terminal for fetching content from at least one server. The cellular communication terminal is arranged with a receiver and a transmitter, to receive and transmit data packets from at least one server through links. The link is arranged to transmit the data packets between the terminal and the server arranged with a first memory comprising an identifier and at least one item. The item is provided with an access point, which indicates the location of the server to be accessed. The server is accessed by sending the access point and the identified to the link to identify a first content to be accessed. The first content is associated with link content, which is provided at different locations in the server or on other servers. A browser application is arranged in the terminal, to establish a session to link, by reading an item from the first memory.
